Dear Mr. Emmanuel Mbevi,

Ref: Letter of Appreciation – Installation of 8.6KW Solar Power at Tshikapa Airport I The DR Congo

The implementation of 8.6KW solar power to provide electrical energy to the VHF station and the airport in Tshikapa in 2013 was a huge success.
This initiative costing over R3 Million has enabled the airport to meet its demands in relation to electrical power supply for the VHF station as well as the airport building. Apart from savings in financial recurrent expenditures (due to maintenance and fueling the generators) the implementation of solar PV power as a source of renewable energy will ensure a reduction in CO_2 emission.

As you may be aware, the VHF station is critical in air traffic control which ensures that the overflying and landing aircraft are separated laterally and horizontally for the safe operation of flights (domestic and international). DR Congo has had many challenges maintaining supply of energy to its extended VHF stations due to aging electrical infrastructure in the country. The solar panel was an ample solution to this.

I would like to recognize your efforts in making this project a success. In particular, I would like to single out your personal intervention to ensure on time delivery of the solar batteries from Germany and the solar panels and other equipment from Johannesburg. All the deliveries were done with such short notice and it shows tremendous commitment and values to achievement on the part of your company. IATA trusted you with equipment to the tune of more than R1.2 Million (Ksh12M) and you delivered within your promise and at competitive costs under the circumstances.

Thank you and we look forward to future work initiatives with you that will benefit our organizations.

Yours sincerely,

Tanja GROBOTEK- IATA Regional Director SFO, Africa and Indian Ocean
